IQRF Gateway with Mozilla IoT

The screenshot shows the Mozilla IoT Things Gateway web interface. The browser tab is titled "Things Gateway" and the address bar shows "localhost:8080/things/i". The main content area displays a "THING" named "iqrfEmbedThermometer-0". Below this, a diagram shows a "node" with the value "0" connected to a central "THING" circle, which is then connected to a "temperature" property showing "20.1 celsius". At the bottom, a card for the "iqrf-adapter" add-on is visible, version "0.3.2", by Logimic. The Mozilla IoT logo is in the bottom left corner.
